

In the specification:

Please replace paragraph [0026] on page 9, with the following rewritten paragraph:

[0026] FIG. 1 is a flow chart illustration which shows how some embodiments of the invention operate in some environments. As is typical with flow charts, FIG. 1 illustrates process 100 of the invention as a series of process blocks. At block 102, category selection is carried out. This block typically involves user input, possibly from category checklist 104, which can be used by a team that is making use of an embodiment of the invention. At block ~~104~~ 105 category weights are input. At block 106, various items are input for each category. In this example, it is assumed that an embodiment of the invention is being used for an RFP process. At block 108 each item is assigned a weight.

In the drawings:

The FIG. 1 process block with the legend "Category Weight Input" was inadvertently given the duplicate reference number "104" in the originally filed informal drawings. This reference number was changed to "105" in the formal drawings, which are being submitted in reply to the Notice to File Missing Parts mailed separately.
